Intel HD Graphics 4000

Die Intel HD Graphics 4000 (GT2) ist eine Prozessorgrafikkarte in den CPUs der Ivy Bridge Generation (3. Generation von Intel Core z.B. Core i7-3770). Je nach Prozessormodell wird die Intel HD Graphics 4000 unterschiedlich getaktet (und kann auf den unterschiedlich großen Cache zurückgreifen) und bietet daher eine teilweise deutlich geringe Leistung. Weiterhin kann die Taktung durch die Turbo Boost Technologie je nach Anforderung und TDP deutlich

erhöht werden. In den schnellen Modellen soll der Basistakt 650 MHz und der Turbo 1.1 bis 1.25 GHz betragen. Die ULV Modelle weisen jedoch einen deutlich geringeren Basistakt auf (Sandy Bridge z.B. 350 MHz).

Im Vergleich zur HD Graphics 3000 der Sandy Bridge Prozessoren, bietet die 4000er einen eigener Cache, überarbeitete DirectX 11 taugliche Shader (und vier mehr) und soll dadurch bis zu 60% mehr Leistung (3DMark Vantage) zeigen. Weiterhin sollte die GPU auf den gemeinsamen Last Level Cache (Level 3 Cache) des Prozessors zugreifen können. Weiters können die Shader auch für Direct Compute genutzt werden.

Erste Benchmarks positionieren die HD Graphics 4000 (in einem schnellen Desktop Quad-Core) auf dem Level einer Nvidia GeForce GT 330M und dadurch oberhalb der integrierten Prozessorgrafik Radeon HD 6620G. In unserem Unfangreichen Testbericht der HD Graphics 4000 konnte sie sich im schnellen Core i7-3820QM deutlich durchsetzen (6620G 15% langsamer). In den Mittelklassemodellen Core i7-3610OM und einem Dual-Core i5 war sie nur noch knapp schneller. Manchmal ist sogar eine langsame GeForce GT 630M in Reichweite. Gelegenheitsspieler, die bei Bedarf mit einer geringen Auflösung, deaktivierter Kantenglättung und niedrigen Settings leben können, werden daher an der HD Graphics 4000 durchaus Gefallen finden. In den ULV Prozessoren (Core ix-3xx7U) wird eine geringer getaktete Variante eingesetzt. Durch die TDP Beschränkungen kann der Turbo außerdem meistens nicht so hoch takten, wie bei den 35/45 Watt Versionen. Dadurch ist die HD Graphics 4000 hier meist etwa 30% langsamer als in schnellen Quad-Core CPUs.

Eine Besonderheit der Ivy Bride Grafikkerne ist, das nur 4x MSAA von der Hardware unterstützt wird. 2x MSAA wird per Software berechnet und geht durch die 4x MSAA Pipeline. Daher empfiehlt sich der Einsatz des gleich schnellen 4x MSAA.

Auch der integrierte Videodecoder genannt Multi Format Codec Engine (MFX) wurde kräftig überarbeitet und soll nun sogar mehrere 4K Videos parallel dekodieren können (ev nur in den High-End Modellen). DXVA Checker gibt weiterhin die Formate MPEG2, VC1, WMV9 und H264 als unterstütz an. QuickSync zum schnellen Transkodieren von Videos wurde ebenfalls verbessert und soll nun schneller bei gleichzeitig höherer Qualität laufen.

Ebenfalls neu ist die Unterstützung für drei unabhängige Bildschirme (abhängig von der Umsetzung im Notebook eventuell nur zwei gleichzeitige möglich). Bis jetzt waren nur zwei möglich und lediglich die AMD Grafikkarten mit Eyefinity Support bieten mehr als zwei Anschlüsse für Notebooks (jedoch nur mit DisplayPorts).

Der Stromverbrauch ist dank des 22nm Prozesses mit 3D Tri-Gate Technologie relativ gering und nicht einzeln angegeben. Die Notebook-Prozessoren (CPU, GPU, Speichercontroller) sind gesamt auf einen TDP von 18-45 Watt spezifziert.
